Experience

Deloitte – Amsterdam, The Netherlands

September 2020 – Present

Specialist lead / manager

- Built and designed a serverless neobank on AWS with Golang for one of the largest banks in The Netherlands.
- Introduced metrics and observability to make our incident management as efficient as possible.
- Became a subject matter expert for event-driven microservice-based applications.
- Coached and mentored junior colleagues to help them shape their careers by regularly scheduling 1:1 sessions, making room for them to learn skills, and by sharing advice on how they could achieve their goals.

Senior specialist / senior consultant

- Lead the development of Deloitte Netherlands' cloud native (Java / AWS) digital loan origination system for Converge Banking Suite by defining capabilities, designing new features, and improving the customer journey.
- Modernised the architecture of a large distributed monolith by clearly separating domains, merging services, enforcing consistent standards, and (re)defining the datamodel.
- Lead a cross-functional, international, team of engineers by maintaining a clear technical vision and ensuring that everyone is aligned on the direction the project is headed in.

Specialist / consultant

- Designed and built new microservices for a digital loan origination solution for a large Dutch bank by collaborating across teams and by proactively suggesting improvements.
- Created a custom ETL (Extract, Transform, Load) microservice that converts unstructured JSON Kafka events into SQL tables and uploads the data via FTP to a datalake.

Analyst

- Contributed to a digital loan origination solution for a large Dutch bank that reduces the time it takes to apply for a loan from 6 weeks to 15 minutes by automating their offline processes.
- Implemented new business logic in various microservices by collaborating with senior engineers on the team.

Sumo Digital – Sheffield, United Kingdom

September 2019 – August 2020

Junior Programmer

- Sped up QA feedback cycle by building a dashboard for a custom testing framework that displays graphs, performance statistics, history, test results, and video streams using React, a NodeJS server, and Websockets.
- Optimised Unreal Engine's source code to more efficiently pack a game's resources for PlayStation platforms by aligning data closer together in the final disk image.

Placement Programmer

- Improved quality of PlayStation 5 launch title "Sackboy: A Big Adventure" by creating a custom cross-platform testing framework for PC, PlayStation 4, and PlayStation 5 using C++ in Unreal Engine 4.
- Reduced test result ambiguity by creating a custom GPU-accelerated automated video recorder application that allowed the QA department to see why their gameplay tests failed.

Skills

Languages: Java, C++, Go, JavaScript

Technologies: Kafka, Spring Boot, AWS, React, Docker, Kubernetes

Other: End-to-end delivery, technical leadership, requirement refinement, mentorship

Education

Breda University of Applied Sciences – BSc Creative Media and Game Technologies

2016 – 2020
